

## Healing Our Planet Through Sound and Vibration

by Juli Szilagyi

The sound and vibrational program through the Sound and Consciousness Institute([www.soundhealingcenter.com](http://www.soundhealingcenter.com)) has opened up many new and fascinating fields of study to us. Many of these fields of study are based on ancient, or maybe a better word would be timeless, information. We have been fortunate to be able to access this information again. A field of study that has peaked my interest is how sound and vibration can affect our environment, especially soil, plants and water that have been damaged by pollutants or non-beneficial frequencies.

Recently, I had an experience that reinforced the fact that sound and vibration really do affect our environment. Although the experience was subjective, it left a great impression on me. I will never forget the feeling of awe as I experienced what felt like a response from the waters and sand of the Pacific Ocean. As I struck and inserted a 432 hz tuning fork into the ocean over and over again I felt the water and sand responding. Suddenly, I felt a stool form under me, seemingly made by the sand. It appeared very quickly, in an animated fashion, as if to say, "please, make yourself comfortable, we are enjoying this." I looked at the water and it was gently lapping around my ankles. Again, I got the sensation that the water and sand were wanting more of this vibration. I stood up, reached for the rest of the forks and gave an attunement, inserting the forks into the sand at the shoreline with a set tuned to the pythagorian scale. I knew that through the crystalline structure of the sand and water the vibrations would travel far.

Sound waves are frequencies. There are naturally occurring frequencies and man-made frequencies that can be beneficial or harmful to our biosphere. Man-made EMFs, electromagnetic frequencies, also known as EMRs, electromagnetic radiation, are rather new to Planet Earth and its inhabitants ([dissidentvoice.org](http://dissidentvoice.org)). Over the last twenty-five years these frequencies have intensified and are blocking out the earth's natural resonance. These frequencies are making human beings sick and also negatively affecting other living things, such as insects and birds. The microwaves that are created by cell phone towers have now been linked to the global occurrence of bee colony collapse syndrome, the decline of migratory bird species and an epidemic of cancers.

Since 2006, colony collapse disorder (CCD) has become a grave concern around the globe. Healthy bees are suddenly leaving their colonies and hives. Since all food production depends on insect pollinators, such as bees, this is presenting an "agricultural emergency" ([dissidentvoice.org](http://dissidentvoice.org)). A sudden decrease in migratory birds, including numerous songbirds, has also been noticed in recent years. Cryptochromes, or magnetically sensitive cells that are found in all plants, animals and human beings are being affected by the microwaves emitted from cell phone towers. In humans, these cells found in the pineal gland control melatonin production, which helps in destroying cancer causing free radicals. It is believed that cryptochromes in bees and birds aid

them in navigation of the earth's magnetic fields and that the microwaves disable this ability.

Other man-made frequencies, such as radiation from atomic blasts and nuclear plants are presently affecting the biosphere in a way we have never experienced. Humankind, in its unconscious drive for technology and control, has disrupted its natural guidance system.

How do we correct this situation? There are a number of technologies based on our natural guidance system, or naturally occurring sound and vibrational frequencies, that can alleviate or transmute these detrimental frequencies.

One of these technologies was mentioned at the beginning of this paper; the tuning fork. Although, it is a seemingly simple tool, I could feel its subtle and powerful affect on the crystalline water and sand. Other technologies are electronic tuners and various sonic stimulants to affect the growth of plants and beneficial microorganisms in water and soil. Sonic Bloom ([dancarlsonsonicbloom.com](http://dancarlsonsonicbloom.com)) and Coherent Resources ([coherentresources.com](http://coherentresources.com)) are two companies developing and offering these technologies. These technologies bring about greater vitality in the plant, increased yields, higher nutritional value, and the restoration of oxygen levels in water.

Sonic Bloom uses the same frequencies song birds emit during chirping, which cause plants to open their stomata, or the mouth-like openings found on all leaves. This sonic stimulation affects plant metabolism and increases the absorption rate of nutrients and moisture. Organic sprays are used when the stomata are open and the plants more easily absorb the nutrients. "Yields can be 50 to 700% greater than normal" ([dancarlsonsonicbloom.com](http://dancarlsonsonicbloom.com)). Sonic Bloom is used in many countries. It especially aids plants growing in poor soil. Over time the soil will improve as the plants take in nutrition throughout their whole system, including their roots.

Coherent Resources has developed the Coherent Water Resonator. The Resonator generates coherent electromagnetic frequencies, which restores oxygen levels and stimulates microbial activity to clean up toxic chemicals.

These frequency technologies are being used in countries around the world, although they are still underutilized and cannot completely overcome all detrimental man-made frequencies and pollution, especially those emitted by cell phone towers.

Nikola Tesla's discoveries and patents based on terrestrial stationary waves, would provide clean, free energy to all of earth's inhabitants through wireless power ([teslasociety.com](http://teslasociety.com)). In fact, it is believed that the pyramid structures found around the world were once receiving and transmitting stations for wireless energy and communication ([youtube.com](http://youtube.com)). Even though Tesla became conscious of this technology a century ago, it was suppressed because of the inability to meter and make money

from it. Today's scientists and inventors are also becoming conscious of this way of harnessing and using energy. Soon it will be too difficult to suppress. Utilizing this natural energy source would go a long way in helping the earth and its inhabitants come into resonance with natural universal frequencies again, which offer the optimal environment for growth and evolution.

It is said that history is cyclical in nature and that we live in a series of repeating ages, each age having its own specific qualities (baharna.com). In some of these ages consciousness and knowledge grow dark and we live in a confused and unconscious state and in others we are awakened and have intelligence and knowledge that we are presently unable to imagine. It appears we are coming out of the dark ages and are slowly gaining back a more conscious state of being. With it we will again be able to access knowledge that has been unobtainable for some time. Like the stomata on a leaf, our own consciousness is stimulated by the new frequencies and energies of our current age, which will allow us to grow stronger, more intelligent and evolve in new ways.
