

Barbara Gantt – Final Paper due on 11-26-13 Sound Healing Semester One.

This report includes information about the *Noosphere*, the *Morphogenetic field*, *Animal Magnetism*, *Mesmerism*, and how the effect of this field can be used for various methods of healing and attaining higher levels of consciousness and greater understanding and evolution.

What is *Universal Consciousness*? Is it the all knowing, all seeing, all pervading life in space? I Am presence? Are we all sparks of Light, turned into matter and form, so that Source can experience itself in each and every one of us? I believe we are all manifestations of Source/ God incarnate. We are a reflection of source embodied. Without form, expansion would not be possible. Source could not see us as reflections of the love and light in which creation began, as ever expanding love and knowledge.

The Great Central Sun is the Source of all life, light, darkness, and the silent spaces in between. That is why we Know Things from nothing to everything, but have forgotten, until we each get our own wake- up call and remember again. Since the first spark of expansion, the *Akashic Records* have been created for us to know our individual blueprints, as well as the entire cosmic blueprint, when we remember.

Within the *Noosphere*, All thoughts, feelings, and impressions each person experiences, and actions we take, affect the rest of the world experiences. As each of us develops the ability to unify with Source and Self at our own pace, we learn to make choices that are for the highest good for ourselves and for all beings. We are talking *Alchemy* and *Transmutation* and when Love and Light touches each of us, enough of us will resonate that vibration and entrain the rest of the collective. I believe there is the Conscious Collective, and the Unconscious Collective....One grid, with polarity going on cosmically. Like a Pendulum coming to center point, when the overall collective finds balance and Heart Coherence, Chaos will cease and Harmony, Love, and Beauty will prevail. Chaos is happening, and so is assistance, compassion, and Love for so many, due to the seemingly rude awakenings. All in all it is a choice to love, or not. Many have made the choice to exit this planet now or soon to come.

The *Noosphere* is the place where Consciousness dwells in the minds of all beings. When each soul begins to see and feel reverence, and gratitude for life and understands the concept of being one with all creation, it is easy to see how it greatly effects one's own health and healing, as well as the world's sustainability and continuation. The information coming through will become clear and cellular memory that has been stored in each of us that is no longer needed can be transmuted.

The *Noosphere* is a concept used by **Vladimir Vernadsky** and **Teilhard de Chardi**, to denote the "*sphere of human thought*". The word derives from the Greek (nous"mind") and σφαῖρα (sphaira "sphere"), in lexical analogy to "*atmosphere*" and "*biosphere*". It was introduced by **Pierre Teilhard de Chardin** in 1922 in his *Cosmogenesis* .

In **Vernadskie's** theory. the *noosphere* is the third in a succession of phases of development of the Earth, after the *geosphere* (inanimate matter) and the *biosphere* (biological life). Just as the emergence of life fundamentally transformed the geosphere, the emergence of increasing human understanding and cognition fundamentally transforms the biosphere. **Vernadskie's noosphere** emerges at the point where humankind, through the mastery of nuclear processes, begins to create resources through the transmutation of elements. It is currently being researched as part of the **Princeton Global Consciousness Project**.

For **Teilhard**, the *noosphere* emerges through and is constituted by the interaction of human minds. The *noosphere* has grown in step with the organization of the human mass in relation to itself as it populates the Earth. As mankind organizes itself in more complex social

networks, the higher the *noosphere* will grow in awareness. This concept extends *Teilhard's Law of Complexity/Consciousness*, the law describing the nature of evolution in the universe. *Teilhard* argued the *noosphere* is growing towards an even greater integration and unification, culminating in the *Omega Point*- an apex of thought/consciousness - which he saw as the goal of history. Recent understanding of human ecosystems and of human impact on the *biosphere* have given rise to the idea that we must work towards sustainability and *harmonization* of cultural and biological evolution.

One of the original aspects of the noosphere concept deals with evolution. *Henri Bergson*, (1907), was one of the first to propose evolution is "creative" *According to Bergson, Creation* is upheld, by a *constant vital force which animates life and fundamentally connects mind and body*.

In 1923, *C. Lloyd Morgan* took this work further, elaborating on an "*emergent evolution*" which could explain increasing complexity (including the evolution of mind). Morgan found many of the most interesting changes in living things have been largely discontinuous with past evolution, and therefore did not necessarily take place through a gradual process of natural selection. Rather, evolution experiences jumps in complexity (such as the emergence of a self-reflective universe, or *noosphere*). Finally, the complexification of human cultures, particularly *language*, facilitated a quickening of evolution in which cultural evolution occurs more rapidly than biological evolution.

Living systems are operating in an environment that exchanges energy and matter, that create internal order, often taken to be a measure of disorder.. then live systems can spontaneously expand and evolve towards equilibrium, which is the state of maximum balance.

This is true at every level of biological organization and increasingly so the more abstract such order becomes within living systems. For instance, genes create an abstract information framework within which multicellular organisms may modify the topology of the epigenetic information, in order to adapt and subsequently evolve. This may include changing the genes that are themselves involved in the abstract information framework or altering the manner in which these genes actively work together.

As more truth, or lies are discovered about a certain reality, and the old reality belief system changes, and this creates, in effect, an increase in new knowledge and awareness locally. When a thought or a belief in the mind alters the information state of the surrounding environment due to an "information moment" impressed upon the surrounding environment, the mind may be capable of inducing a local entropic force that is produced when many minds simultaneously focus, thus producing an even more amplified phenomenon.

To sum up the *Noosphere*, it is a place where Unity Consciousness lives, and so do all the other types of thoughts and impressions, so it is up to us to make a choice as to what we want to do with our own energy for the highest good of all beings, seen and unseen.

*Morphogenetic fields* contain the developmental blueprints for species types. They program our future. All conscious creation, from *micro to macro*, is manifested through these imprinting field templates.

The theories of *Morphogenetic fields* have been greatly influenced by *Rupert Sheldrake*, biochemist and author of more than 80 scientific papers and several books. He believes that there is a telepathy type connection that transfers biological information beyond the gene state.

His theory suggests that DNA, rather than being the source of all developmental coding, is instead the receiver of information from the *morphic field* for the species type.

*Sheldrake* coined the term, '*morphic resonance*' which is described as the invisible, energetic pathway through which all thoughts and ideas are filtered. This resonance involves the influence of like upon like. This is the influence of patterns of activity on subsequent similar patterns of activity, an influence that passes through space and time from past to present,

regardless of physical distance.

His research findings reveal that there is a built-in memory within nature, which is part of its evolution and biological development. The theory suggests that similar things in the past affect similar things in the now and this is what holds systems together. A **morphogenetic field** is a '*force of habit*' created from cumulative memory. Because of morphic resonance, (like attracts like), we are created 'as usual' and like everyone else in our species type. It would seem, that to change the 'usual' patterning from repeating itself, we would need to both override the memory based mechanism and consciously depart from the field of influence that is transferring the energetic data.

In the 18<sup>th</sup> Century A German Dr. by the name of **Franz Mesmer**, gave our world the name of **Animal Magnetism**, a term he coined based on his belief that *Magnetism* was an invisible force exerted by animals, which had a healing effect on humans.

**Animal Magnetism to Mesmer**, was a principle that touched both man and the Universe at all levels; psychological, human, and cosmological. His theory is based on the concept of something through which everything in the Universe is interconnected. It is something before matter. He called it a "*Universal Fluid*". This fluid or **life force energy source**, which is subtle in nature, fills the Cosmos and moves in it. This fluid is the basis of which matter is constituted. When this fluid circulates, humans are healthy, and when there are blockages, we experience sickness. *Magnetism* can be compared to a 6<sup>th</sup> sense. The senses are felt rather than defined or described. It must be mainly transmitted through inward feeling, or intention. As opposed to relying on external signs, it stands out as a method where inner sensations and inner intuition are seen as guides. Some "*Magnetizers*" would use Laying on of the Hands in order to attempt to focus energy to the areas that needed healing. Reported effects included various feelings of intense heat, trembling, seizures and trances. A key point to note is that *Animal Magnetism / Mesmerism knowledge is extracted from "intuition"*.

Starting in 1779, and for about 75 years, *Animal Magnetism* was practiced as a Specialty field. It is still practiced as a form of alternative Medicine in some countries today. In 1784, **Marquis Puysegur** developed **Magnetic Somnambulism**. This is a "Mesmeric sleep" state. Now it is called Hypnosis.

"Modern philosophy has admitted to the Universal principle of *fluid matter, which occupies all space*; and that as all bodies moving in the world, abound with pores, this *fluid matter* introduces itself through the interstices and returns backwards and forwards, flowing through one body by the currents, which issue therefrom to another, as in a *magnet*, which produces that phenomenon which we call **Animal Magnetism**. *This fluid consists of fire, air, and spirit, and like all other fluids tends to create an equilibrium*, therefore it is easy to conceive how the efforts which the bodies make towards each other produce **animal electricity**."

There is one *vital substance in Nature* upon which all things subsist. It is synonymous with the *Astral Light or spiritual air of the ancients*. The quote below written below by **Eliphas Levi**, comes from the **Paracelsian system of Medical Philosophy** during the middle ages.

In regard to this substance "Light, that creative agent, the vibrations of which are the movement and life of all things; Light latent in the universal ether, radiating about, absorbing centres, which being saturated thereby, project movement and light in their turn, so forming creative currents; light, astralized in the stars, animalized in animals, humanized in human beings; light, which vegetates, all plants, glistens in metals, produces all forms of Nature, and equilibrates all by the *laws of Universal Sympathy*—This is the light which exhibits the phenomena of magnetism, divined by Paracelsus, which tinctures the blood, being released from the air as it is inhaled and discharged by the hermetic bellows of the lungs" (The History of Magic). From the book *The Secret Teachings of all Ages*, by Manly P. Hall.

*Spiritualism* and *Occultism* were brought in the twentieth century via the stream of *Mesmerism*, as well as the offspring of *Para psychological* researches in Russia, and America. *The New Thought Movement* and the *Theosophical movement* still holds *Mesmer* as one of its spiritual masters in the field for discovering the unconscious, and namely of the idea of tapping into potential for healing.

There are many new and also ancient healing discoveries, and information technology is growing in the field of healing. The use of Zero Point and Scalar energy for example, and crystal and minerals that are embedded with healing frequencies such as Frequency and Intention disks, are widely being used to protect ourselves from EMFS.

This concludes my report, and I hope you enjoyed reading it as much as I did discovering some new information.

Thanks,

Barbara Gantt
