

Astro and Quantum Physics The Energy, Frequencies, and Vibrations of the Universe and Cosmos. The great Inventor Nikola Tesla said "If you want to understand The Universe think in terms of Energy, Frequency, and Vibration." That is what we study at Globe Institute. In 1967 Pulsars were Discovered which are rapidly rotating Neutron Stars. These Neutron Stars rotate spinning at a frequency so fast there electric-magnetic energy fields become so strong they give off powerful radiation jets which are measurable in radio waves that is how they were first detected and discovered. Pulsars rotate at a frequency so fast and consistently some scientist say Pulsars are some of the music of the Universe even though there is no sound in outer space. In The Yoga Sutras they describe the Universe being made of Spanda translating to Vibrational Patterns of Energy. Everything in the Universe being made of the same substratum prakriti. Translating to what we would call sub-atomic particles. Particles Vibrate in Patterns of Energy together to create atoms, basic elements. Atoms of all kinds form bonds vibrating together to create molecules. Molecules bond together through the electric-magnetic force to form larger complex objects. These larger complex objects vibrate together to create complex environments and even organisms, to plants and trees, to animals aquatic, aerial, and land and even into Human Life. These complex environments can develop even further into Planets, moons, and Stars. These complex environments can be Gas Giants, Ocean water worlds

and Terrestrial like our Earth. Planets and moons orbit, rotate, and vibrate around Stars creating Solar Systems or Star systems. Other Star systems bond together through the Gravitational Force Gravity to create Star Clusters. We are part of a local Star Cluster. Star systems and Star Clusters develop further formations Spiraling, Rotating, and Orbiting around a Super Massive Black Hole creating Galaxies filled with hundreds of Billions of Stars. Some Galaxies even have Trillions of star systems in them. We are part of a Galaxy we call The Milky Way. Galaxies themselves develop even further through the Gravitational Force to form and create huge Galaxy Clusters all expanding throughout The Universe. Our existence in The Universe is a Beautiful Cosmic Dance of Vibrational Patterns of Energy. Everything in our expanding Universe from the smallest particles to the largest objects are created and exist through the same way Energy, Frequencies, and Vibrations.
